

Configuring Products to Print to Kitchen, Drink and Grill Printers

This article provides instructions on how to send different Sale Items to the Kitchen, Grill and Drink printers.

This tutorial shows how to set what printer a specific item will print to.

In BakeSmart you can send requests to different printers depending on the item. For example, you could have all your coffee drinks print to a "drink printer" so the person working the coffee station knows they need to make a new beverage.

To set an Item to print to a specified printer we need to look at the Product in the "Products Form View."

From the BakeSmart home screen select Products then Find Product.

In this instance we will be setting our Product "Vanilla Latte" to print to the Drink Station, so in "Find Mode" input "vanilla" and we will receive a list of all Products that have the word Vanilla in the title.

Item Name	Category	Subcategory
▶ Vanilla Latte	Hot Drinks	
▶ Vanilla Iced Cookie	Baked Goods	Cookies

Once we receive a list of all Products with Vanilla in the title, click once on "Vanilla Latte" to enter "Products Form View" for Vanilla Latte.

In this view we want to make sure "Include in POS" is checked (so we can sell Vanilla Lattes).

Click on the "More..." button and we will see the "Point of Sale Information" for the Product Vanilla Latte.

In this screen we can choose what additional printers we want a Sale Item to print to. Since this is a drink product we will check the box for "Print Receipt to Drink Printer?"

Point Of Sale Information
